Born in Giussano, Italy · 2 October 1980

01 / ABOUT

I started working professionally in 2000, moving between development, systems and infrastructure. Since then, I've been an entrepreneur, a freelancer, a technical lead and a CTO.

The thread through all of it is simple: I like building things, and understanding how they should work. Sometimes that means looking at the whole system. Sometimes it means getting one small detail right.

I use AI every day in my development process: to explore ideas, build and iterate. It's part of how I work, alongside experience, curiosity and the responsibility to understand what I ship.

I'm also a dad. Work is a big part of my life, but it's one part of it.

I still like being close to the code.

03 / SELECTED WORK

Feesbee

Products · Co-founder & CTO

Poliform / Socialidea

Lead Developer: Poliform.it and custom web applications, including Poliform's Private Area.

Johannes / Max Mara

Web apps for live events, from photobooths to brand activations.

SELECTED PROJECTS & COLLABORATIONS

KPMG · AIFI · Casa.it · idealista

Bologna FC · Blossom

02 / EXPERIENCE

Independent Software Engineer & Technical Lead

Self-employed · 2018 - Present

I build software across products, platforms and experiences - from how it works to how it feels.

My work combines hands-on development, technical direction and project management, moving between full-stack development, architecture and the wider technical decisions behind a project.

I work on platforms, business applications, web apps and digital experiences, collaborating with teams and organizations across different industries.

Co-founder & CTO

Feesbee · 2024 - Present

Feesbee is a platform for electronic invoicing and everyday administration, built for businesses and independent professionals.

As Co-founder & CTO, I work across product decisions, architecture and hands-on development.

CEO

Redvolver · 2015 - 2018

Led Redvolver, a digital team focused on websites, e-commerce and custom web applications. Alongside running the company, I remained directly involved in web development and the technical side of projects.

System Administrator & Software Developer

MOVINFO · 2003 - 2015

Worked across software development, systems and infrastructure, developing PHP applications and managing Linux and Windows environments.

My work covered application development, databases, networking, virtualization, monitoring, mail and backup systems, as well as the research and integration of new technologies.

Software Developer & System Administrator

Professional Systems · 2000 - 2003

Worked across software development and systems administration. Developed DMTCruscotto, a custom CRM application built in VB6.
